

UNIWORDH COIN (UNIX)

INTRODUCTION

Thank you for reviewing the Uniworth Coin (UNIX) whitepaper. here you will read about our future plans and solution we will provide for the next generation of blockchain currency system. Uniworth Coin is introducing a new system of using blockchain for online payments, investments and digital cash ability for micropayments . Our company is willing to raise the standards of living of mankind. Uniworth team will provide professional marketing and investment services based on smart contract software helping start-up companies evolve.

Uniworth Coin (UNIX) is an innovative asset-backed cryptocurrency that resolve some of the main concerns with cryptocurrencies that are regarded as inefficient, unreliable and risky. Some of these failure points include price volatility, extended transaction processing times, market manipulation, the inability to transact low value payments, and the absence of any asset backing to justify the price of these cryptocurrencies. The Uniworth Coin (UNIX) micropayment solution and investment plans are conceptualised to address these issues and introduce a currency backed by assets as a safe store of

value mechanism for transacting. Uniworth Coin (UNIX) is not based on current widespread generic blockchain protocol systems that rely on mining for continued coin release. The global demand for a safe secure store of value and stable universal currency is the purpose for the creation of Uniworth Coin, and we are ready for widespread adoption.

Key Features of Uniworth Coin

- **Micropayments**

Our Micropayments are defined as transactions online for digital content at minimum values.

- **Money Transfer**

Our online payment system is able to provide fast and low cost money transfer facility

- **Micro investments**

We will invest in to develop small project to raise the standards of living of mankind.

- **Smart Loans**

Life is complicated and full of ups and downs. We believe that every one deserve a helping hand time to time. We are going to provide the smart loans worth \$500 - \$5000.

What is Cryptocurrency ?

A digital currency in which encryption techniques are used to regulate the generation of units of currency and verify the transfer of funds, operating independently of a central bank.

"decentralized cryptocurrencies such as bitcoin or Ethereum is now provide an outlet for personal wealth that is beyond restriction and confiscation"

What is Uniworth (UNIX) Coin?

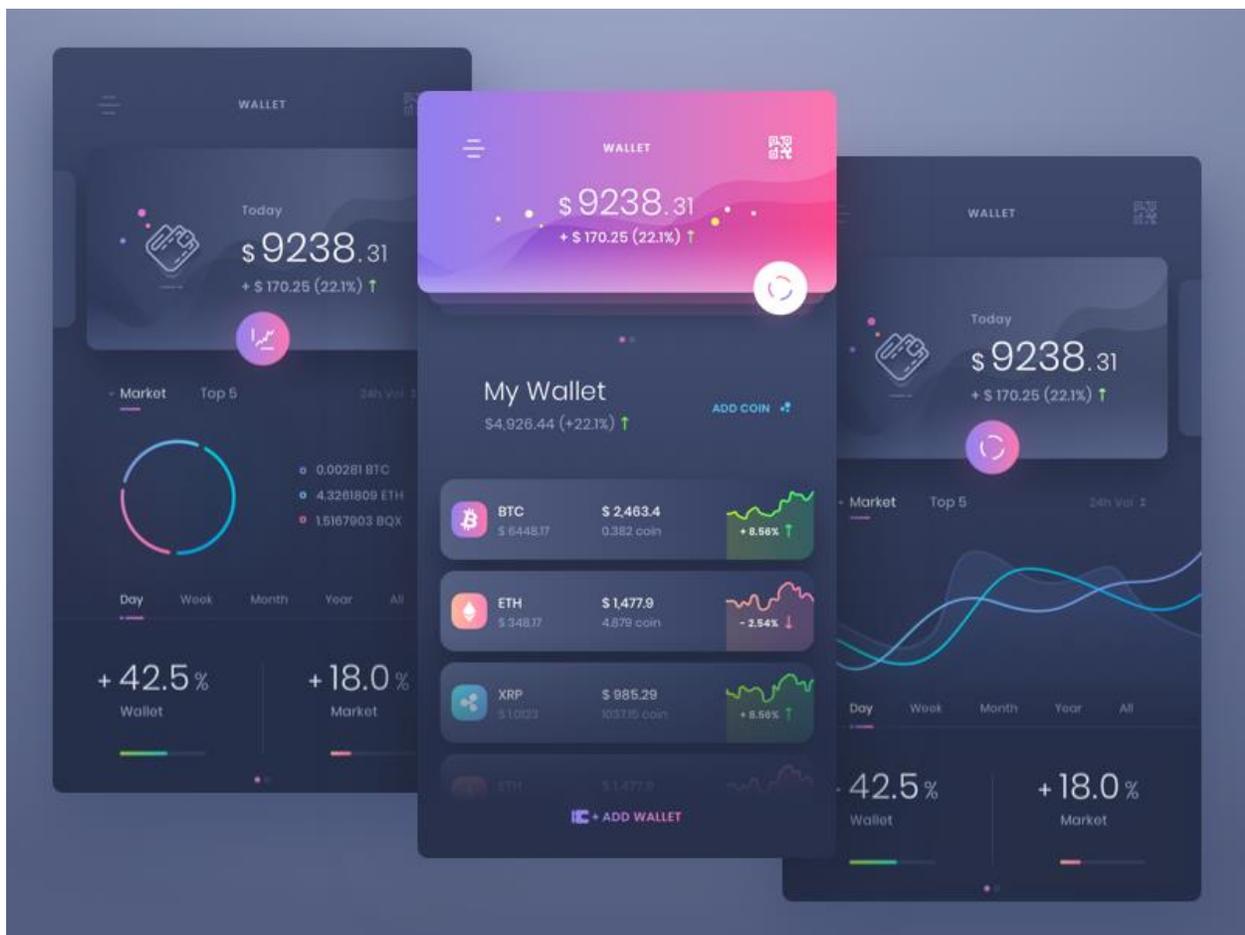

Uniworth Coin (UNIX) is a secure, safe asset-backed cryptocurrency build on a multi-dimensional blockchain as a partially distributed ledger that is used for real-time payments. The underlying value of Uniworth Coin is established on a risk profile based user-defined allocation of a portfolio of asset classes. The Uniworth Coin (UNIX) wallet offers innovative features like Cross-Chain exchange for all forms of crypto currencies, micro-payments platform for internet transactions, person to person digital cash payments, Micro Investments and Smart Loans.

We believe that money must serve the primary purpose that it was intended for, which are a medium of exchange, a unit of account and a store of value. The solution by Uniworth Coin (UNIX) eliminates the need for using banking products. We facilitate payment directly between parties, commonly known as Peer-to-Peer (P2P) payment. Your money resides in your wallet, and when you effect payment it is instantaneous similar to giving cash. As a crypto currency which is not linked to a sovereign country, it can facilitate instant, frictionless payments even across borders, with very low fees, enable low value transactions, and at very fast processing times Uniworth Coin (UNIX) provides a means of exchange of value in systems where trust in central authority has been lost. Digital and analogue money up to now failed to provide a globally appealing and efficient means of payment

UNI WORTH COIN (UNIX) WALLET

Pre-sale period (Round 1)	March 15th to April 15th, 2018
Pre-sale period (Round 2)	April 16th to April 30th, 2018
Pre-sale bonus	Bonus of up to 30%
ICO Start	May 01 2016
Main sale bonus	1st 24 hours 20% 1st week 15% 2nd week 10%
Exchange rate	1 ETH :2,000 UNIX
Limits	10,000 ETH (Hard Cap)
Accepted currencies	ETH & BTC only
% of Token sold	40%
Nationality	Anyone except Singapore, Estonia, China and the US due to legal restrictions or from countries subject to trade sanctions imposed by the US.

What is a Token Sale?

When further development is needed by a company, a token created by the company can be sold in exchange of funds.

The benefits of a token sale are two fold; from a company perspective, the main advantage of it is that the company gains quicker access to funds than via traditional founding routes. From a purchaser perspective, there is a larger number of reasons why this method can be more interesting than traditional investment;

- While traditional funding consists of exchanging money for shares, which in most cases are not tradable, most tokens can be sold back to the market at any moment in time. By doing this, purchasers can allocate their resources in more liquid assets.
- There is an increasing number of individuals purchasing crypto- currencies and hence, there is a need of generating yield within the ecosystem.
